

ABSTRACT OF THE DISCLOSURE

5 A kit which may be used for anterior tooth selection, the kit including a facial
meter for measuring the width of a nose and/or the distance between the eyes, and
for correlating the measurement to a tooth size, and an anterior tooth selection guide
consisting of a plurality of cards which have various sets of upper anterior teeth of
differing sizes, soft and bold, depicted thereon so that a dentist or dental professional
may place a card adjacent the face of the patient to make an initial evaluation of the
teeth to be selected based upon the use of the anterior tooth selection guide. The kit
10 may also includes a mold guide which includes various sets of anterior teeth and
posterior teeth. This kit facilitates the tooth selection process by the dental
professional.
